This office action is responsive to communications filed 12/04/2006.

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/04/2006 has been entered.

Claims 1, 3 - 6 and 8 - 14 are pending.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1, 3 4 and 13 14 are rejected under 35 U.S.C. 102(b) as being anticipated by Griinke (US 5,085,246).

Griinke discloses a valve assembly that regulates flow therethrough, the valve assembly comprising, a housing having an entrance port (18) and an exit port (lower portion of (22) joining the element (40) with a chamber in between; a plug (12) disposed in the chamber in a normally open position, a translating member i.e. spring (14) that biases the plug in the direction of the entrance port and said plug and spring cooperating to provide a flow resistance actuated by the force exerted on the plug such that the flow resistance increases with the increased force on the plug. The plug (12) has one or more channels (60, 62, 64) extending longitudinally therethrough. The plug

Art Unit: 3753

(12) does have a side (70) that tapers inwardly as said side extends towards the exit port.

It is noted that recitations pertaining to hydrogen gas and associated hydrogen storage system in claims 1, 3– 4 and 13 - 14 are expressed in a functional language that is being regarded in this office action as reflective of intended use only and the system disclosed by Griinke is capable of such use.

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 6. Claims 5, 6 and 8 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Baker et al. (4,600,525) in view of Griinke (US 5,085,246).

Art Unit: 3753

Baker et al. discloses a hydrogen storage system (Fig. 3, for example) having a source of hydrogen (inherently connected to (30)), a pressure containment vessel (10) and a valve (20) connected therebetween.

Griinke discloses a pressure-regulating valve that permits regulated flow therethrough and has a simple construction, as set forth above.

It would have been obvious to one ordinary skill in the art at the time the invention was made to have provided in Baker et al. a pressure regulating valve in place of the valve (20) for the purpose of providing regulated flow therethrough with the valve having a simple construction as shown in Griinke.

Baker et al. discloses the hydrogen storage alloy in canister (10) to comprise a rare-earth metal alloy.

Response to Arguments

7. Applicant's arguments with respect to claims 1, 3 - 6 and 8 - 14 have been considered but are most in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ramesh Krishnamurthy whose telephone number is (571) 272 – 4914. The examiner can normally be reached on Monday - Friday from 10:00 AM to 6:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eric Keasel, can be reached on (571) 272 – 4929. The fax phone number for the organization where this application or proceeding is assigned is (571) 273 – 8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should
